

PRESENTATION OF THE COURSE

This is the third course (after epidermolysis bullosa and ichthyosis) organized in 2010 under the European Project "Together Against Genodermatoses (TAG). The goal is always to promote and implement knowledge about genodermatoses and its treatment with a multidisciplinary approach.

As these diseases involve several organs and systems, the course is directed to physicians of various specialties, who take care of patients suffering from chronic, and often disabling diseases.

TOGETHER AGAINST
GENODERMATOSES
